1. NOTES FROM SITE VISIT	3
--------------------------------	---

1. NOTES FROM SITE VISIT

A site visit was held beginning **9:00AM on July 12, 2023**. After discussion with the attendees, on selected

Sherwood Park Lift Station: This lift station was omitted from the list. It is located at 40 Sherwood Park and requires clearing for the full length of driveway and may require some additional clearing upon request. There is a concrete pad with the lift station access for which East Hants may request services (back-blading to clear it).

Horne Settlement Road Lift Station: This lift station does not need to be cleared every storm but clearing services may be requested from time-to-time. This lift station is located at 20 Old Horne Settlement Hill.

Shubenacadie Water Treatment Plant: East Hants will clear off the raised loading dock but the Contractor should take care not to push snow in front of the dock which would prevent trucks from backing in.

Donaldson Lift Station: This lift station requires clearing from, at minimum, the bollards at the apartment building to the bollards at the lift station. Occasionally, this may require clearing further into the site. If Donaldson has not been cleared by the time these operations start, clearing a path on Donaldson will be included in the scope.

Lift Station# 7 (tavern): This lift station is at 453A Highway 2, Enfield adjacent to Avery's Market near the CN access, across from the former Curley's Pub site. This requires one pass along the long side of the enclosure to allow access to the side door, and one pass along the front.

Enfield Water Treatment Plant: There is a hatch on site that is being resecured prior to the commencement of the contract that can be plowed over or back-bladed. There will likely be a container (seacan) installed on this site prior to the commencement of operations; final placement is to be determined but it will add an impediment to clearing operations not present at the moment.

Lantz Lagoon: There is a concrete enclosure on the left-hand side of the building which contains instrumentation. When clearing the left side of the building, ensure snow is not piled such that it prevents access to the rear of the property; staff have to access the tanks in the back for sampling on a regular basis so maintain a path between the enclosure and the snow pile. Be careful not to hit the enclosure. The ditches along the road approaching the facility are deep and slipping off the edge might require towing to get out.

Milford Wastewater Treatment Plant: East Hants will shovel the walkways under the covered porch and in front of the administration building. Little to no hand work should be required at this building. There is a work trailer normally parked at the facility (near "muster station" sign); access to the trailer to hook on would need to be maintained during clearing operations.

Maitland Road Lift Station: This lift station must be cleared from the main road (Highway # 2) to the end of the driveway at the lift station, including the turnaround spot. This driveway is partially paved, partially gravel. The parking spot for the playground equipment is not included in this contract.

Shubenacadie Waste Water Treatment Plant: The current requirement is to clear the driveway from Burgess Road, the turn-around spot, and the area inside the gate. The dome building must be cleared back from as well as the small building adjacent to it. When the new plant comes on stream, staff will review the requirements with the successful contractor but will likely include the driveway from Burgess Road and turn-around spot plus all the new roads.

Remember to complete the bid form and questionnaire when submitting your quotation.
