Subject: The Celeste - Fence and Material Mockup

Hello Debbie and Sheralee,

Please see the attached photos below.

The 1st photo shows a few wild vines growing. I am going to plant 5 ever green vines along the fence. These are not ever green vines in the photo they are just wild, but I hope it can give council an idea of the added value over time the vines will give the fence. The reason I am doing this is because council Elie Moussa mentioned trying to help solve the issue in a green way. I do not have the room to plant trees all along the fence so I thought a vine would be a nice add on. I will use an ever green vine because it stays green all year and will provide even more privacy and nice residential aesthetics all year long.

Photo Number two below is the mockup of the materials I will use on the neighbors side of the fence. This is privacy a 4x8 sheet of lattice and a 1x6 decking board both weather treated material. I propose to cover the neighbors side of the

fence with privacy lattice all along the back of the fence. I will cap on the neighbors side of the fence posts on either end of the fence with 1x6 board as displayed in the photo.

Photo number three below shows the added privacy added to the neighbors with this completed.

While I was completing this mockup I spoke directly with the neighbor and she was very happy with the mockup.

Thank you

Dean Shea / President
