To East Hants Municipality

Now that the conversations about recent floods have slowed down a bit, I think its time that the municipality address residents concerns in the Elmwood Subdivision- The Lumber Mill was allowed to fill in a pond- not sure how that approval got done or by whom back in the day. The Lumber mill should have to deal with the issue they have underneath where the pond would be to allow proper drainage.

As we seen in a few heavy rainfalls the water goes across to the businesses across the street. CN Rail should be contacted to have their infrastructure checked and advise proper drainage and run off water can flow. Currently the water tends to pool and push back into the businesses next to tracks. Surely we wouldn't want it to collapse and cause a derailment in the near future.

With recent updates from Environment Canada and hurricane centers we should be expecting more issues coming.

last is the business park that has its run off water going into two culverts but yet meets the culvert across the highway to yet again Elmwood subdivision. I know it happens and watched the change of color in the brook with mud color running through it. Has anyone reach out to NS environment regarding development and if the brook is being containment with run off from clearing land? I did a petition in 1999 to stop the development behind Elmwood which is green estates that Macphee owned but nothing changed and John Woodford is still in office so he should have all the names.

Thanks,

Cyndi
