

Aero Future Canada
(AF-C) Inc.

January 2024

Good day,

Re: Testing of Autonomous Aerial Vehicles (Drones) in your community

My name is Judy Xie, and I am the Founder of Aero Future Canada. Aero Future Canada has partnered with EHang Intelligent Technology Co. Ltd., Guangzhou, China, to distribute their line of Passenger Autonomous Aerial Vehicles (AAVs) – drones – in Canada. These vehicles have been designed and built with a number of applications in mind, including the transportation of food and other goods; urban and forest firefighting capabilities; and, medical emergency response abilities. The vehicles have been put through rigorous testing to ensure safe operation in a variety of environments.

The current maximum weight allowed by Transport Canada for AAVs is 150kg. Given the need for this type of technology in Canada, particularly in remote and Indigenous communities that need reliable access to goods and the current need for firefighting capabilities, we have contacted Transport Canada to obtain special certification to begin testing these vehicles in Canada. We are currently working with Transport Canada to test flight these drones and put them through vigorous tests in Communities in Canada.

We would like the opportunity to speak to you directly about these vehicles, to discuss how they can be of service **and the possibility of having them tested within your community.** You can reach me at the contact information below or through my consultant, Jeremy Beamer of GTA Strategies, at 416-499-4588 ext. 2, or at jeremy@gtastrategies.com.

Thank you for your kind consideration of this matter. I look forward to hearing from you.

Sincerely,

Judy Xie, Founder
Aero Future Canada
