Subject: Kennetcook Fire

Councillor Roulston,

The Kennetcook and District Volunteer Fire Department is looking for a fire truck to replace our aging tanker 1021. Our research shows that the replacement cost will

be in the \$650k-\$700k range. The preferable replacement would be a pumper tanker. We have contacted a financial institution for some preliminary financing

information. We presently have \$200k in our truck fund. The department would like to inquire into the possibility of obtaining the \$100k funding allotment from the municipality that is available for fire apparatus purchasing. This, along with our \$200k, would dramatically reduce our financing cost. Any information on how we could get the ball rolling on this would be gratefully appreciated. If the funding is available, could we have a document stating so to include in our financial proposal.

Thanks very much

Steve White, Fire Chief KDFD
