**Subject:** C25(350) - Civics 155 - 159 Highway 2, Enfield - Sidewalk Request

Hi Jesse,

Thank you for your letter regarding the proposed sidewalk between civics 155 and 159 Highway 2 in Enfield.

In general, we do not have any major concerns with a proposed sidewalk in this area. Exact requirements are site specific. However, our primary considerations are usually that the sidewalk is sufficiently setback from the travelled way, will not present a hazard to motorists or our snow and ice control equipment, and does not negatively impact drainage.

With respect to any proposed pedestrian crossings, these would need to meet the specific warrants as outlined in the TAC manual. We can complete an assessment to determine pedestrian volumes; however, based on a high-level review, it is unlikely that this location would meet the minimum criteria to warrant a crosswalk. TAC recommends that these warrants be met as installations at locations with low pedestrian crossings can lead to driver complacency and create a false sense of security for users. We would also need to review other site-specific factors such as available sightlines, etc.

Typically, we also require that there be a landing area or destination for the crosswalk, though this would likely be satisfied with the installation of the proposed sidewalk.

If you would like to proceed with the sidewalk, feel free to send a sketch or preliminary drawing along for review. Also, if you would like us to complete a crosswalk assessment, let us know and we can do so when weather conditions permit.

Thanks,

**Patrick Lemal, P.Eng**
